Acergy/Subsea 7

Enterprise Project Management (EPM) Implementation and ERP interface configuration

In order to address the complexity and mitigate the risks inherent in any large-scale ERP implementation, Dada Enterprises provided effective support to manage the deployment. Through authoring and presenting system Blue Prints we explained the to-be processes, organisation and tool-sets. Our interim capability structured the governance model to manage the ERP transition, post-implementation support model, data migration and testing activities.

Dada Enterprises set up the right programme management approach, ERP integration interfaces and processes to turn strategy into system implementation.

About Acergy

Overview:

Acergy (now part of Subsea 7 following a merger) initiated a programme to improve their project controls capability across their 12,000 people strong company. This led to a SAP global and multi-phase rollout to move from region and country based processes to optimised ways of working. Following on from the merger Acergy required that the existing ERP tool set, already being utilized across Subsea 7, be integrated into the change programme.

The Dada Enterprises Advantage

- Realistic forecasting of schedules and budgets and coordination between themselves and other projects
- SAP/Cobra/P6 solution supported the key business processes, delivered in line with anticipated value
- Global project controls solution across multiple releases over 12 countries and 456 users
- Improved program and project management maturity
- Delivering M&A value by ensuring systems integration supported cost saving predictions
